Electronic Communications Coordinator (ECC) George Michael

Goals

The Region 8 Electronic Communication Coordinator's job is to facilitate communication, both between members of the Region 8 Committee, and between this committee and present or future IEEE members.

Progress against goals since the last report

- Performing updates to our new web server.
  - Updates include new security features and logging in an attempt to identify potential risks.
  - There is an increasing number of OUs that are being added to our Wordpress servers. We are improving the live streaming features of our meetings, we are preparing a setup which will not only stream the video footage from the monitors and the audio from the internal audio system but it will embed a video of the speaker as well. New security requirements by Google required us to perform certain updates to the upcoming meeting mobile application. Enhancing our presentation tools to avoid a few technical issues that occur during meetings due to limited technical options at the hotels.

Points of Concern

Due to the current hosting service being used, we are still unable to take some extra security measures that we would like to have. We are waiting for an update from the IT team.

Proposals for Electronic Communication in R8 improvement

Further enhance technical tools, maybe with higher tier equipment than home user tier.
