Discussion Spotlight

What is the most valuable thing you have learned from your role?

 3 responses  18 views

Mohamed A.

Digital Transformation Sales Lead, Nokia, Nokia

I learned to understand and listen more to customer needs and challenges to be able to address them properly.

Aleksandar M.

International Expert - Consultant For Smart Technologies, Self-employed

I find that the diversification of my career path brings me many benefits. I tried to find new challenges and to change the job once in 5 years to be able to observe processes in multistakeholder ability.

Andreas N.

Product Manager, International Software Vendor

Value is something very individual and will come in very different shapes and forms. Over time, value may change and different aspects become important. To have a good stake in all areas to me has proven to be good advice. As an IEEE Member I often find members to be very inclined towards technology, whereas an overview of other disciplines often is a good first start. Beyond that, communication skills, network, business insights, trend topics and global dependencies, personal branding, all that will be good skills to have. At different times.

Details

Concrete examples of things that each of them have learned from their role and their IEEE membership

Dialogue

Multiple responses from different insiders provide a variety of information from different viewpoints

Discussion Spotlight

Please tell me about the training when you first joined your company?

1 responses 1 views

Matej P.

Project Manager & SW Specialist, Inteltech, S.r.o.

The very first training was done by HR and it was as expected. But the "real" training of how to work with the team was: "you sit here and if you want something, find out yourself". I got a senior engineer to be my mentor, but he always told me that I'm old enough to be self-sufficient. That was not what I was expecting, but actually it was true and it was also a very good lesson. After some time, I got my first big project and then the team helped me a lot with many technical discussions. And that was the great spirit of the team which helped me to build confidence, experience and skills. Actually, the reason why the team was working well together was, we were a very good fit on a personal level - we are friends today, even if we don't work together anymore. That job was very challenging, but the team made it a big fun time for me.

Storytelling

Create a narrative by explaining how his onboarding was different from his expectations and how it has helped him in his role since

Authenticity

Honest, personal details from first-hand experience give users an insight into what they might expect from a similar role
