# Pre-University Education Coordinating Committee

## Mission

We foster educational outreach to pre-university students around the globe by supporting teachers and IEEE volunteers with the tools for engaging activities and measurable outcomes.

## Vision

IEEE and the world will look to PECC's leadership and insight in bringing youth to the global technical community.

## Core Values

- Global Community Building
- Service to Youth
- Diversity and Inclusion
- Excellence
- Innovation and Discovery
- Empowerment

# Why?

---

School-aged children who pursue a career in engineering and/or technology develop “Engineering Habits of Mind” and special soft skills such as resilience to failure, critical thinking and many more. Those habits of mind introduce them to a continuous self-improvement process that leads to a better version of themselves ensuring an enhanced quality of life for them, while at the same time, those soft skills make them essential to contemporary society and effective in shaping a brighter future for the world.

Pre-University Education Coordination Committee (PECC) actively seeks out individuals and organizations who work with school-aged children and share this noble objective, namely to encourage those children to pursue a career in engineering and technology which may eventually help them ensure an elevated standard of living for themselves and better prospects for a more promising future for the society.

# What is TryEngineering On Campus?

- Business proposal for Universities that are willing to partner with IEEE to hold camps for school-aged children
- Only summer camps? NO! When it is more convenient for students and teachers in your country.
- Duration and program can vary depending on your needs and culture
- Is there funding? Maybe.
- Is there a licencing fee? Not for the first year.
- Do participants need to pay a fee? We suggest that they do because:
  - participants who pay are more likely to attend
  - when participants pay for the program, there is an expectation of a high-quality program

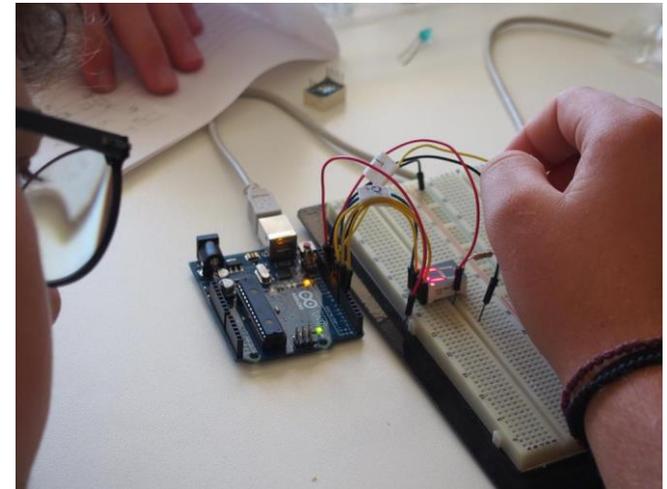

# TryEngineering and the PreUniversity Coordinating Committee will

- Meet with you and your team to give you an overview of the program
- Provide you with a template for a project plan and budget
- Consult with you about curriculum, pedagogy and training
- Assist you in promoting your event
- Include your results in TryEngineering's end of year reporting
- Consult with you as questions come up during your planning

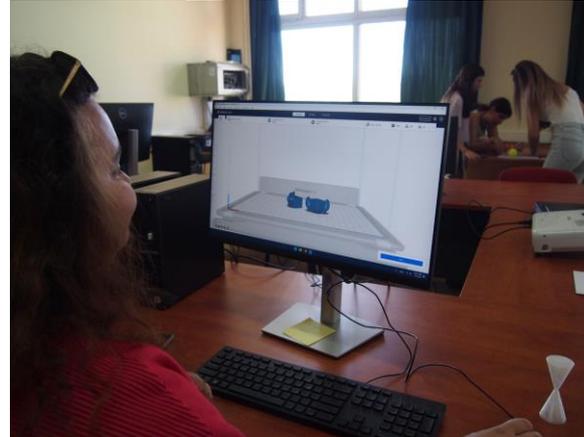

# TryEngineering On Campus and IEEE

- Introduces IEEE members at universities to high quality materials and programs
- Introduces teachers to the Engineering Design Process and a hands-on approach to learning, which they bring back to their classrooms
- Introduces a diverse population of students to explore engineering as a possible career

# TryEngineering On Campus - Pilot

- University of Ioannina (Arta, Greece)
  - 40 students
  - 20 volunteer educators
  - Participation fee: 100 euro
  - 3 university professors became IEEE members
  - 21 students became IEEE student members and formed a new student branch

# TryEngineering On Campus - Pilot

## Hong Kong Section @ City University

- 38 students from 18 schools
- Participation fee: 170 USD
- University professors collaborated with university students to mentor high school students during the event
