

Greece Section

Georgios Sirakoulis (Treasurer)

Section Vitality

The last Section elections took place at the end of 2024 and the new officers will be in office for the period 2025-26. Next elections are expected at the end of their term. Regular ExCom meetings have been held discussing administrative and strategic plans to maintain membership and activity. Membership retention and recruitment efforts have included various technical and non-technical meetings aimed at both member and non-member participation.

Student Membership:

The IEEE Greece Section has actively engaged with student branches across several universities, showcasing strong initiatives to promote technical knowledge and community involvement among engineering students. Activities organized consistently focused on building a collaborative environment where students can interact, learn, and grow professionally. Regular meetings have taken place both virtually and physically, offering members various opportunities to engage in discussions and share knowledge on emerging technologies and industry trends. Participation in these meetings has been notably diverse, with significant representation from numerous universities, demonstrating effective outreach and inclusive student engagement strategies.

The continued commitment of IEEE Student Branches within Greek academic institutions is evident, aiming not only to maintain student interest but also to encourage new memberships through creative and appealing technical sessions and collaborative projects. Furthermore, the student branches have demonstrated considerable success in organizing non-technical and social events aimed at creating a cohesive community environment among IEEE student members. These events included structured networking opportunities, welcoming new members, facilitating interactions among peers, and providing a platform for sharing experiences. These non-technical activities also function as valuable outreach tools, helping bridge the gap between academic life and professional engineering careers, effectively preparing students for future professional endeavors.

In addition to community and networking events, the student branches have prioritized technical education through a variety of lectures, workshops, and seminars tailored specifically for engineering students' academic and professional development. These technical sessions have consistently featured contemporary and highly relevant topics, ensuring alignment with the latest trends and technological advancements in various fields of engineering. They have served as instrumental resources for students seeking supplemental education beyond their regular coursework, helping to deepen their understanding and competence in critical areas such as computing, electrical engineering, communication technologies, and robotics. Furthermore, many of these technical events have been enhanced by the participation of industry experts and academic scholars, whose contributions have provided invaluable insights, real-world applications, and career guidance, significantly enriching the educational experience of student attendees.

- University of Western Macedonia-Kastoria, WIE

Affinity Group Membership:

The IEEE Greece Section Affinity Groups—including Young Professionals (YP), Women in Engineering (WiE), and Life Members (LM)—demonstrated sustained activity and a growing presence through a variety of initiatives tailored to their respective communities. The events organized by these Affinity Groups were diverse in format—ranging from webinars and panel discussions to hybrid sessions and collaborative meetups—and attracted a broad audience from within and beyond the IEEE community. Importantly, many of these initiatives were conducted in cooperation with Student Branches and Technical Chapters, further enhancing engagement.

Young Professionals, in particular, maintained strong momentum by supporting initiatives that ease the transition from student to professional life, offering practical insights, and networking opportunities. Meanwhile, the Women in Engineering group carried out activities that aimed to promote visibility and recognition for women in STEM fields, foster collaboration among female engineers, and empower early-career members through inclusive dialogues and peer support structures.

Society Membership:

The IEEE Greece Section Chapters have remained highly active organizing a wide array of technical events aimed at disseminating knowledge, fostering professional collaboration, and promoting innovation within specialized fields of engineering. These activities have spanned a broad spectrum of topics—ranging from core areas such as signal processing, circuits and systems, and communications, to emerging domains including artificial intelligence, natural language processing, machine learning, cyber-physical systems, and energy technologies. The events have included lectures, seminars, and webinars, often featuring distinguished lecturers and academics from both local and international institutions.

Moreover, the participation levels in these events, both students and professionals, have shown encouraging consistency, indicating strong alignment between chapter activities and member interests. In addition to knowledge dissemination, the Chapters have contributed significantly to professional development by providing platforms for interdisciplinary exchange and exposure to latest research trends. Events were often collaborative in nature, involving multiple chapters or coordinated efforts with student branches and affinity groups.

Industry

The IEEE Greece Section has continued to strengthen its ties with the industrial sector by supporting and organizing activities that foster collaboration between academia, research institutions, and companies. Various events were designed to enhance technology transfer among members with a particular focus on emerging industry needs. These initiatives have featured professionals from diverse fields such as information technology, electronics, energy systems, and telecommunications. Overall, the Greece Section is shown consistent dedication to industry engagement.

Diversity, Equity and Inclusion

The IEEE Greece Section recognizes the critical importance of diversity, equity, and inclusion (DEI), and has taken proactive steps to ensure that its activities are representative and welcoming to all members. Through targeted events and inclusive programming, the Section has aimed to amplify underrepresented voices within the engineering community, particularly focusing on creating space for women and young professionals to engage meaningfully in technical and leadership discussions. Collaborations with existing Affinity Groups, as well as outreach initiatives aimed at encouraging broader involvement.

Activities since the last report

The organized activities have spanned a wide range of themes and formats, including virtual seminars, hybrid meetings, and in-person gatherings, thereby accommodating different levels of accessibility and preferences among members. Beyond formal lectures and meetings, activities have included interactive formats such as workshops, collaborative project discussions, and community outreach sessions. These formats provided a more engaging experience, encouraging both participation and meaningful dialogue among attendees. Attendance data indicates a strong turnout of both IEEE members and non-members, underlining the potential outreach of many of these events.

The Section also placed a strong emphasis on multi-institutional collaboration, evident through events that involved joint efforts among different universities, chapters, and affinity groups. This strategic collaboration not only enhanced the scope and quality of individual events but also encouraged synergy across academic and professional communities. These collaborative efforts have included coordinated planning and cross-promotion of activities to maximize impact. Importantly, these partnerships allowed for the inclusion of a broader range of perspectives and expertise, which enriched the content and relevance of the activities conducted.

Another major area of development has been the Section’s focus on fostering community, both within the IEEE structure and among the wider public. Many events were designed not only with educational objectives in mind but also with a deliberate aim to foster a sense of belonging and shared purpose among participants. These included gatherings centered on community discussions, open forums for feedback, and sessions dedicated to celebrating achievements and milestones within the Section. The welcoming tone and inclusive structure of these events created an environment conducive to member interaction, volunteer recruitment, and mentorship cultivation.

Planned activities

Looking forward, the IEEE Greece Section is developing a forward-thinking agenda that emphasizes continuity and strategic alignment with both local needs and global trends in technology and education. Planned activities for the upcoming period include a mix of technical, professional development, and outreach initiatives aimed at maintaining high levels of engagement across students, professionals, and affinity group members. Efforts will be focused on expanding interdisciplinary collaboration, increasing industry involvement, and facilitating more student-centered programs that align with current academic cycles and technological interests. Particular attention will also be given to improving the quality and accessibility of virtual events, ensuring wider participation and inclusiveness. As part of a broader objective to cultivate future leaders, the Section intends to offer leadership training and mentoring opportunities, especially for younger members.

How Region 8 can be of help to your Section, members, and activities

Providing platforms for career development opportunities, particularly for industry-oriented members, could significantly increase membership value.
