

IEEE North Macedonia LMAG activities

IEEE North Macedonia LMAG (LM80077) was established in November 2021. Since its establishment, LMAG had organized, sponsored, or co-sponsored many activities within the IEEE North Macedonia Section.

The LMAG had established very good cooperation with all other entities in the section, especially with the Student Branch and Student Branch Chapters.

In 2022 all activities within the Section are dedicated to the 25th Section Anniversary and the 75th anniversary of the transistor. One of the special talks was “Celebrating 75th Anniversary of the Transistor” delivered by LMAG Chair Goce Arsov as an invited talk at the Summer Symposium on Electronics and Signal Processing held in Krushevo June 24-25.2022 (Fig.1). The presentation was repeated at the celebration of the IEEE Day (04.10.2022) (Fig. 2). As a Section founder and its first Chair Goce Arsov (actual LMAG Chair) was invited to deliver a talk at the Section Meeting organized to celebrate its 25th Anniversary.

One of the major events in 2022 (from more than 30) supported by the LMAG was a pre-university competition named RoboMac Junior organized by our student branch and student branch chapters (Fig. 3). LMAG financially supported this event.

Another big event organized by our students was RoboMac (organized for the 11th time) from the 8th to the 13th of May 2023 with participants from several surrounding countries. (Fig. 4).

In 2022 Prof. Georgi Dimirovski (LMAG Vice-Chair) was awarded the Regional (R8) Individual Service Award which was presented to him in person at the R8 LM meeting in Prague. He and LMAG Chair Goce Arsov attended this meeting.

At the meeting in Prague, Goce Arsov presented the application for IEEE Milestone from the Faculty of Electrical Engineering and IT in Skopje submitted in 2018. This IEEE Milestone was approved in 2023.
