

Symposium book – String galvanometer

Last April, we organized a symposium, entitled: “IEEE Milestone Award ‘String Galvanometer’; The Heritage and the Promise of Electrocardiography and Electrophysiology”.

During this symposium, the prestigious IEEE Milestone Award has been dedicated to the invention of the string galvanometer by Willem Einthoven.

We are proud to present you now with the symposium book. All speakers contributed with a paper that reflects their presentation.

This open access e-book can be downloaded for free from webpage:
